## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of the invention of group I, claims 1 – 3 in the reply filed on June 4, 2004 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 5,793,272 to Burghartz et al.

Regarding claim 1, Burghartz et al. teach a semiconductor device (Figs. 4 – 6, for example) having an inductor on a semiconductor substrate, comprising a unit including:

an interlayer insulating film (14') formed above the semiconductor substrate (12);  
a spiral trench (25'; Col. 6, lines 47 – 53) in the interlayer insulating film; and  
an interconnection layer (16') embedded within said spiral trench,

wherein the inductor is configured by a plurality of said units (Fig. 6) stacked up in a direction substantially perpendicular to the main surface of the semiconductor substrate, and

a plurality of said interconnection layers (16', 16) included in said plurality of units are arranged so as to be stacked up one after another in a direction perpendicular to the main surface of the semiconductor substrate, and have a substantially identical width.

***Allowable Subject Matter***

4. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach, alone or in combination, a device as cited, wherein the width of the spiral trench is greater than a film thickness of the interlayer insulating film. Nor does the prior art teach an electrode at a position furthest from the substrate having a protrusion in a direction perpendicular to the main surface of the insulating film.
